

ABSTRACT OF THE DISCLOSURE

A toy for preparing frozen confectionaries comprising a base assembly, and a tray removably supported by the base assembly and having a pair of troughs. A cylinder assembly is rotatably supported by the base assembly and has pair of cylinders rotatably positioned in the pair of troughs. The toy also has a cover assembly supported by the base assembly, and a crank assembly rotatably supported by the cover assembly and coupled to the cylinder assembly for rotating the pair of cylinders to prepare frozen confectionaries. A method for preparing frozen confectionaries with a toy. The pair of cylinders contain freezing salt and ice such that the liquid confectionary freezes when contacted by the cylinders.
